Education

Dr. APJ Abdul Kalam Technical University

B.Tech in Computer Science and Engineering

Uttar Pradesh, India

Aug. 2021 – May 2025

Experience

Cars24

Oct. 2025 – Apr. 2026

Java + React Full-Stack Developer Intern

Gurugram, India

- Owned **Prism** – a B2B microservice portal for Cars24's enterprise data services – from zero to full delivery, supporting **49+ onboarded B2B clients** by end of internship.
- Built backend services in Java (Spring Boot) implementing **6-role RBAC**, wallet transaction logic, and RESTful HTTP API endpoints, applying OOP and structured exception handling.
- Shipped React frontend modules – analytics dashboard, wallet management UI, and batch request processing screen – consuming REST APIs and rendering real-time status feedback for client operations.
- Hardened input validation and exception handling in client onboarding flows within a microservices architecture, cutting error-related client support queries during onboarding.

STAIRS (Startup)

Oct. 2024 – Dec. 2024

Frontend Engineer Intern

Remote

- Engineered React + Tailwind CSS screens for a career placement platform covering training modules and multi-step assessment workflows, integrated with JWT-authenticated REST APIs.
- Eliminated layout-related QA failures across Chrome, Firefox, Safari, and Edge on both mobile and desktop by auditing and rewriting cross-device CSS.

Projects

JobHunt AI | *Python, Streamlit, SQLAlchemy, scikit-learn, Sentence-Transformers, Ollama*

GitHub

- Built a local-first job assistant that scrapes 7 free job APIs, parses resumes, ranks jobs with a hybrid ATS + semantic (MiniLM) score, and drafts cover letters with a local LLM (Ollama); 215 pytest tests in CI.
- Tuned match weights on 52 hand-labelled postings, raising **precision@5 from 0.00 to 0.60** and **nDCG@10 from 0.07 to 0.85**; added prompt-injection guards and a URL allowlist.

Employee Management System | *Java, Spring Boot, ReactJS, Node.js, MongoDB*

GitHub

- Implemented a full-stack employee records system applying Java OOP (encapsulation, inheritance, interfaces) with 6-role RBAC, JWT authentication, and full CRUD operations.
- Optimised MongoDB schema and query structure for efficient reads; implemented indexed MySQL queries to support manager-facing reporting queries.

Mini URL Shortener API | *Node.js, Express.js, MongoDB, PostgreSQL*

GitHub

- Constructed a REST API supporting URL validation, custom short-code generation, configurable expiry, and per-link hit tracking with automated cleanup of expired entries.
- Structured codebase with modular routing and input sanitisation; wrote edge-case unit tests to improve branch coverage.

Technical Skills

Languages: Java (OOP, Collections, Exception Handling), Python, JavaScript, SQL, HTML, CSS

Frameworks: Spring Boot, ReactJS, Node.js, Express.js, Tailwind CSS, Streamlit

Backend & Databases: REST APIs, Microservices, MongoDB, MySQL, SQLite (query optimisation, schema design)

AI/ML: scikit-learn (TF-IDF), Sentence-Transformers, LLMs (Ollama, Gemini)

Tools & Platforms: Git, GitHub, GitHub Actions, Postman, VS Code, IntelliJ, Vercel, Linux, Docker

Practices: Code Reviews, Debugging, Unit Testing (pytest), Input Validation, RBAC, JWT, CI/CD

CS Fundamentals: Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks

Achievements & Leadership

- Technical Head, Ignitia Fest (2023 & 2024)** – led all technical event planning and execution across two consecutive years, managing cross-functional teams spanning design, logistics, and judging.
- 2nd Place, College Coding Competition** – awarded Rs.8,000 prize out of 50+ participating teams.
